

# DID YOU KNOW?

## BRAKE FLUID ABSORBS MOISTURE

The more moisture there is, the less efficient your brakes are.

50% of cars & light trucks on the road require a brake fluid test & flush service to return them to federal safety standards.

This tester boils a small sample of brake fluid, just like the sae test mentioned on every brake fluid container.

This tester displays the brake fluid's boiling point in less than a minute.

This tester proves if your brake fluid needs changing.

This tester identifies those vehicles whose brake fluid has absorbed too much moisture to be safe.

**DON'T  
DELAY  
TEST  
TODAY!**
